Care for the World

N-VIRO is a recognized leader in the management and treatment of wastewater biosolids. We have the expertise, experience and commitment to provide full service solutions for the beneficial use of unwanted biosolids. Currently transforming leftover residuals into beneficial resources is the most socially accepted option for elimination.

Concern has never been greater for the environment as all eyes are focused on efficient, sustainable conservation. N-VIRO is committed to providing integrated environmental solutions from beginning to end through an array of company owned innovative patents.

At N-VIRO our mission is to renew waste products into valuable end products that have the capability to reduce GHG emissions and provide cost effective fertilizers to regain balance to nutrient depleted farmlands. In doing so N-VIRO will meet the demands of a growing energy intense world and replenish overworked agricultural soils for increased harvests.
