N-Viro International Releases CEO Live Interview with CFO James McHugh

TOLEDO OHIO, February 18, 2010 – N-Viro International Corporation (OTC Bulletin Board: NVIC.OB) (“N-Viro”), an environmental and materials operating company that owns patented technologies to convert various types of waste into beneficial reuse products, including the renewable biofuel N-Viro Fuel™ and N-Viro Soil™, announced today that a CEO Live Video Interview with Mr. James K. McHugh, the Company’s Chief Financial Officer, Secretary and Treasurer, is now available.

This video interview is part of an ongoing series that will feature key members of the N-Viro Executive Team addressing topics related to the Company’s business performance and strategy. The interviews are not intended to provide the first announcement of material information or developments about N-Viro. Instead, they will discuss matters previously announced through other channels or that are not themselves considered material information under securities laws, even though the matters may be important to shareholders.

Mr. McHugh commented, “We believe alternative energy is the next major growth sector, and, as Dr. Logan said last week, N-Viro’s technology is rugged, it’s very economical and fits perfectly into this growth sector. I expect only very good things happening once our first plant gets built and we can show the market and potential new partners and customers what this is all about – they need to see it in action and have a tangible product that performs the way we think it will perform.”

A complete press release containing the video interview may be accessed by visiting the “N-Viro International - Social Media Newsroom” at

About N-Viro International (www.nviro.com)

N-Viro International is an environmental and materials operating company that owns patented technologies to convert various types of waste into beneficial alternative fuel products. Its renewable biofuel technology, N-Viro Fuel™, has received alternative energy status from the U.S. Environmental Protection Agency, which qualifies the technology for renewable energy incentives. N-Viro operates processing facilities independently as well as in partnership with municipalities.

N-Viro recently launched an improved web site at www.nviro.com, where interested parties can follow the progress of the Company. N-Viro will continue to routinely post press releases on the site and encourages stockholders and interested parties to monitor this web site on a regular basis.

Special Cautionary Note Regarding Forward-Looking Statements

The Company cautions that words used in this document such as "expects," "hopes", "anticipates," "believes" and "may," as well as similar words and expressions used herein, identify and refer to statements describing events that may or may not occur in the future. These forward-looking statements and the matters to which they refer are subject to considerable uncertainty that may cause actual results to differ materially from those described herein. For example, while the Company expects business expansion projects to begin in an estimated time frame, such expectations are subject to adverse economic conditions and other factors outside of the Company's control. Further, the Company's ability to increase capabilities and expand capacity is subject to the ability of the Company or its partners to access sufficient capital to pay for this expansion, which will further depend on, among other factors, market acceptance. The Company's ability to achieve profitability of these projects could be negatively impacted if there is a lack of an adequate supply of waste or expenses increase above the Company's expectations - including fuel and transportation costs, labor costs and costs relating to the treatment and processing of the biosolids and creation of the N-Viro Soil or N-Viro Fuel. In addition, while the Company believes that trends in "greener" energy solutions are moving in favor of the Company's technology, such trends may not continue or may never result in increased sales or profits to the Company because of the availability of competing products and other alternative energy source. All of these factors, and other factors, will affect the profitability of the Company. Additional information about these and other factors that may adversely affect these forward-looking statements are contained in the Company's reports, including its Annual Report on Form 10-K for the year ended December 31, 2008 and other filings with the Securities and Exchange Commission. The Company assumes no obligation to update forward-looking statements to reflect actual results, changes in assumptions or changes in other factors affecting forward-looking information except to the extent required by applicable securities laws.
