**N-VIRO INTERNATIONAL ANNOUNCES CONSTRUCTION OF LICENSED  
N-VIRO SOIL FACILITY IN TEL AVIV, ISRAEL**

**TOLEDO, OH, Wednesday, July 15, 2009** – N-Viro International Corp. (OTC BB: NVIC) (“N-Viro”), an environmental and materials operating company that owns patented technologies to convert various types of waste into beneficial reuse products, including the renewable biofuel N-Viro Fuel™ and N-Viro Soil™, has announced that construction has started on an all-new N-Viro Soil™ facility that will serve the Dan region of Israel, which includes Tel Aviv. In the last 60 days the facility has received its permits and construction has commenced. It is believed that the facility can be operational in 2009. The facility will be owned and operated under a license by the Shafdan, the utility provider in the Dan region. N-Viro and its Israeli partner, CRM Military and Civilian Technologies, are both very pleased at reaching this important milestone.

Timothy Kasmoch, CEO and President of N-Viro International, said, "We are extremely excited the Israel project is under construction. This opportunity is the product of several years of development. The project enforces our commitment to expand our technologies into the global market and serves as initial steps in developing our international footprint. While we are concentrating our efforts in the U.S. to begin electrical generation with N-Viro Fuel, we are delighted to create a presence in Israel with our N-Viro Soil product line and manufacturing process. We look forward to the fully-commissioned facility at its completion."

The N-Viro Processes are used for the recycling of wastewater biosolids from municipal wastewater treatment facilities. N-Viro Soil produced according to the N-Viro Process specifications is an "exceptional quality" Class A (Class AA in Florida) biosolid product meeting all regulatory standards.

**About N-Viro International ([www.nviro.com](http://www.nviro.com))**

N-Viro International is an environmental and materials operating company that owns patented technologies to convert various types of waste into beneficial alternative fuel products, including the renewable biofuel N-Viro Fuel™ and the N-Viro Soil™. Its renewable biofuel technology, N-Viro Fuel™, has received alternative energy status from the U.S. Environmental Protection Agency, which qualifies the technology for renewable energy incentives. N-Viro International operates processing facilities independently as well as in partnership with municipalities.

**Special Cautionary Note Regarding Forward-Looking Statements**

*The Company cautions that words used in this document such as "expects," "anticipates," "believes" and "may," as well as similar words and expressions used herein, identify and refer to statements describing events that may or may not occur in the future. These forward-looking statements and the matters to which they refer are subject to considerable uncertainty that may cause actual results to differ materially from those described herein. For example, while the Company expects to begin operations in Israel in 2009, such expectations are subject to adverse economic conditions and other factors outside of the Company's control. Further, the Company's ability to increase capabilities and expand capacity is subject to the ability of the*

*Company or its partners to access sufficient capital to pay for this expansion, which will further depend on, among other factors, market acceptance. Our ability to achieve profitability of operations in Israel could be negatively impacted if there is a lack of an adequate supply of waste or expenses increase above the Company's expectations - including fuel and transportation costs, labor costs and costs relating to the treatment and processing of the biosolids and creation of the N-Viro Soil or N-Viro Fuel. In addition, while the Company believes that trends in "greener" energy solutions are moving in favor of the Company's technology, such trends may not continue or may never result in increased sales or profits to the Company because of the availability of competing products and other alternative energy source. All of these factors, and other factors, will affect the profitability of the Company. Additional information about these and other factors that may adversely affect these forward-looking statements are contained in the Company's reports, including its Annual Report on Form 10-K for the year ended December 31, 2008 and other filings with the Securities and Exchange Commission. The Company assumes no obligation to update forward-looking statements to reflect actual results, changes in assumptions or changes in other factors affecting forward-looking information except to the extent required by applicable securities laws.*
